**ABSTRACT**

A computer-implemented method and system may include receiving one or more images of a body; determining one or more initial body measurements of the body based on the one or more images; determining at least one supplemental measurement of a portion of the body, the supplemental measurement determined at least in part using one or more sensors of a mobile device; and applying a correction factor to the one or more initial body measurements of the body based at least in part on the supplemental measurement to produce a corrected body measurement.
